78. Which output format string correctly allows for 5 positions before and two digits after the decimal point?

1. "%8.2f"
2. "%5.2f"
3. "%7.2f"
4. "%5d.2f"

Title

Which output format string correctly allows for 5 positions before and two digits after the decimal point?

type

mc

Section

2.5 Input and Output

id

testbank-py-1-ch02-78

79. Which output format correctly prints an item description left justified with up to 10 letters?

1. "%10"
2. "%10s"
3. "%-10s"
4. "-%10s"

Title

Which output format correctly prints an item description left justified with up to 10 letters?

type

mc

Section

2.5 Input and Output

id

testbank-py-1-ch02-79

80. What is the output for the following code snippet:

```
area = 25
print("The area is %05d" % area)
```

1. The area is 25
2. nothing, there is an error in the code snippet
3. The area is 00025
4. The area is 25

Title

What is the output for the following code snippet?

type

mc

Section

2.5 Input and Output

id
testbank-py-1-ch02-80

81. Consider the following code segment:

```
a = input("Enter the value of a: ")  
b = input("Enter the value of b: ")  
print(a + b)
```

When this code segment is run the user enters 1 at the first prompt and 5 at the second prompt. The output displayed is:

1. 1
2. 6
3. 15
4. 1 + 5

Title

Section
2.5.1 User Input
id
testbank-py-1-ch02-81

82. The line of code which reads a value from the user and stores it in a variable named `x` as a floating-point value is:

1. `x = float()`
2. `x = input("Enter the value of x: ")`
3. `x = float(input("Enter the value of x: "))`
4. `x = input(float())`

Title
Read numerical input from the user
type
mc
Section
2.5.2 Numerical Input
id
testbank-py-1-ch02-82

83. The line of code that displays the floating point number stored in the variable `x` using 3 decimal places is:

1. `print("%.3f", x)`
2. `print("%.3f" % x)`
3. `print("%3.f", x)`
4. `print("%3.f" % x)`

Title

Format output to 3 decimal places

type

mc

Section

2.5.3 Formatted Output

id

testbank-py-1-ch02-83

84. What output is generated by the following code segment?

```
a = 10.0
b = 0.50
print("The total is %.2f and the tax is %.2f." % (a, b))
```

1. The total is .00 and the tax is .50
2. The total is 10.0 and the tax is 0.5
3. The total is 10.0 and the tax is 0.50
4. The total is 10.00 and the tax is 0.50

Title

Format multiple values in a single output statement

type

mc

Section

2.5.3 Formatted Output

id

testbank-py-1-ch02-84

85. Consider the following code segment:

```
x = 12
print("%d%%" % x)
```

The output generated by this code segment is:

1. 12
2. %12
3. 12%
4. 12%%

Title

Format integer output

type

mc

Section

2.5.3 Formatted Output
